Qyedo

(V. Levin)

Fullstack Developer — Crypto / Web3

Telegram: @qyedo
Remote · UTC-2 — UTC+2
Building software since 2020

Summary

Fullstack developer with experience building crypto / Web3 products, web applications, and internal SaaS systems.

I join a project at any stage — from the initial concept and first launch to a full product and its ongoing development alongside your team.

React · TypeScript · Go · Python / FastAPI · MongoDB · PostgreSQL · TON

Experience

Fullstack Developer - GC Group

2025 - present

Crypto / Web3 and internal web products.

- NFINE - a GameFi ecosystem: built the token website and the app for Telegram, Web, and Android. A game economy, social mechanics, farming, quests, and prediction/trading mechanics all tie into a single financial layer with a transaction ledger.
- MetaForge - a multi-tenant SaaS platform for running a company: projects, tasks, employees, documents, finances, and communication. Permissions are enforced on the backend by role and area of responsibility - the same model limits the context available to the built-in AI.
- For MetaForge, built orchestration across multiple AI models through specialized stages (clarify -> design -> code -> review) and a Docker environment for running generated code with a live preview.
- Built a shared crypto-payment layer used across several products: creating payment sessions, tracking transactions, and preparing payouts to user wallets.
- Built realtime WebSocket mechanics and background jobs (blockchain checks, daily quests, reward payouts) for several products.

Frontend Developer Intern - Smart Techno Lab

2023 - 4 months

Commercial frontend development as part of a team.

Freelance Developer

2020 - 2023

Websites and landing pages for private clients using HTML, CSS, and JavaScript.

Skills

Frontend	React, TypeScript, JavaScript, MobX, Redux, Zustand, SCSS
Backend	Go, Python, FastAPI, REST API, WebSocket
Databases	MongoDB, PostgreSQL, SQLite
Crypto / Web3	TON SDK, wallet integrations, crypto payments
Tools & Platforms	Docker, Git, Telegram Mini Apps, Android WebView, n8n
Languages	Russian - native, English - C1

Portfolio

Public websites, apps, and detailed case studies are available on the site. Private commercial projects I can walk through personally.
